

09b Switch Port Security

Default number of MACs permitted per port	
When MACs are automatically learned, where are they stored?	
Keyword to automatically learn MACs	
IOS Mode where port security is configured	

Modes

Silently drop frames with unexpected source MAC addresses; make no log entry and take no other action	
Add logging to the response and increment the interface error count	
All of the above, plus put the interface in err-disabled mode, shutting down all traffic on the port until an administrator fixes it.	
Default Mode	

Commands

Set response mode to one of the above	
Enable Port Security	
Set maximum MACs to 3	
Explicitly allow MAC 11:11:11:11:11:11	
Automatically learn MACs
